TECHNICAL SERVICES BUREAU OBJECTIVES

COMMUNICATIONS

2005-114 Deployment of the Dublin Emergency Calling System for both emergency and non-emergency notifications.

Accomplished: The vendor and members of the information technology team completed installation of the Dublin Emergency Calling System on February 3rd. Training for all communications technicians was completed on April 6th by CS Chris Burkhardt. CS Burkhardt and CT Ben Karns will serve as the application administrators for DECS. On May 26th, Community Relations issued a press release announcing the system to the public. This announcement resulted in a news article in the Dublin News and an article in the Columbus Dispatch Metro News section.

To date, the system has been used for two events. The first was a GeoCast notification for a last minute road closure around the Bridge & High street area. The second was a community notification for a high number of thefts that had occurred in a particular neighborhood. Both call scenarios were successful. System usage reports are on file.

2005-115 Implement the Incident Dispatching Team (IDT) concept.

Progressing: Communications Supervisors are currently researching the training opportunities available in this area. One course is being offered in November at the Westerville Communications Center. We are currently reviewing the course outline to determine if it will fit our needs. It was discovered that CDL training would need to be included with any training, as the mobile command trailer requires a driver with a valid CDL for transport. Contact has been made with Streets & Utilities to have them provide CDL training for those who would be interested in serving on an IDT. Once the training has been identified and scheduled, a formal announcement will be made asking for IDT volunteers. In the interim, policy will be developed and an ancillary description created.

2005-116 Conduct a communications center evacuation drill.

Progressing: The drill will be conducted in December

2005-117 Conduct a minimum of one fire/EMS and one police critical incident scenario/simulation for every communications technician.

NOTE: The following is a breakdown of calls for service. They represent initial reports. The number of actual offenses may be different after officer's investigation.

WORKLOAD ANALYSIS REPORT

April - June 2005

The April through June 2005 Workload Analysis Report reflects a total of 6,649 calls for service. This figure does not include traffic stops, foot patrols or courtesy cards initiated by officers or activity occurring in District 0 (calls outside city limits/mutual aid). The average response time for calls was five (5) minutes from the time the call was received by our communications technician until the first responding officer arrived on the scene. The average time to reach a disposition and clear the call was twenty (20) minutes.

The Workload Analysis Report also allows us to track activity levels by hour by day. We analyze this data to determine our staffing levels for patrol shifts. By reviewing our Workload Analysis Chart on the following page, you can see that our busiest hour of activity was between 3PM and 4PM. Six hundred thirty-three (633) calls for service were received during this time frame. The next busiest hour was between 4PM and 5PM when five hundred eleven (511) calls for service were received. The ability to obtain this type of data is critical to effectively staff our patrol shifts.

While reviewing this report it is important to note that various factors can influence average response times. "Stacking" of calls where lower priority calls are held so that calls of a more urgent nature can be dispatched and responded to commonly occurs. "Cross dispatching" where an officer is dispatched out of district to a call will also increase response time. Low priority calls that are received during roll call/shift change negate an immediate response from patrol officers thus increasing response times.

As a matter of practice, we like to keep our average response time for all calls occurring inside the City under ten (10) minutes. As previously stated, there are certain incidents where that becomes impossible. However, our goal is realistic and as demonstrated by the April through June 2005 report was met. In an effort to assist the reader in reviewing the Workload Analysis Report the following is a list of some relevant interpretations for review.

WORKLOAD ANALYSIS REPORT

January - June 2005

The January through June 2005 Workload Analysis reflects a total of 12,573 calls for service. This figure does not include traffic stops, foot patrols or courtesy cards initiated by officers or activity occurring in District 0 (calls outside city limits/mutual aid). The average response time for calls was five (5) minutes from the time the call was received by our communications technician until the first responding officer arrived on the scene. The average time to reach a disposition and clear the call was twenty (20) minutes.

The Workload Analysis also allows us to track activity levels by hour by day. We analyze this data to determine our staffing levels for patrol shifts. By reviewing our Workload Analysis Graph on the following page, you can see that our busiest hour of activity was between 3PM and 4PM. One thousand three hundred eleven (1,311) calls for service were received during this time frame. The next busiest hour was between 4PM and 5PM when one thousand one hundred (1,100) calls for service were received. The ability to obtain this type of data is critical to effectively staff our patrol shifts.

While reviewing this report it is important to note that various factors can influence average response times. "Stacking" of calls where lower priority calls are held so that calls of a more urgent nature can be dispatched and responded to commonly occurs. "Cross dispatching" where an officer is dispatched out of district to a call will also increase response time. Low priority calls that are received during roll call/shift change negate an immediate response from patrol officers thus increasing response times.

As a matter of practice, we like to keep our average response time for all calls occurring inside the City under ten (10) minutes. As previously stated, there are certain incidents where that becomes impossible. However, our goal is realistic and as demonstrated by the January through June 2005 report, was met. The following is a break down of calls for service by district with the overall total calls, average response time and average time to resolve the call:

District 1 Totals

2,506 Calls for Service
