# WORKLOAD ANALYSIS REPORT

## April - June 2009

The April through June 2009 Workload Analysis Report reflects a total of 6,374 calls for service. This figure does not include traffic stops, foot patrols or courtesy cards initiated by officers or activity occurring in District 0 (calls outside city limits/mutual aid). The average response time for calls was five (5) minutes from the time the call was received by our communications technician until the first responding officer arrived on the scene. The average time to reach a disposition and clear the call was twenty-two (22) minutes.

The Workload Analysis Report also allows us to track activity levels by hour by day. We analyze this data to determine our staffing levels for patrol shifts. By reviewing our Workload Analysis Report, you can see that our busiest hour of activity was between 9:00 AM and 10:00 AM. Five hundred twenty (520) calls for service were received during this time frame. The next busiest hour was between 4:00PM and 5:00PM when 507 calls for service were received. The ability to obtain this type of data is critical to effectively staff our patrol shifts.

While reviewing this report it is important to note that various factors can influence average response times. "Stacking" of calls where lower priority calls are held so that calls of a more urgent nature can be dispatched and responded to commonly occurs. "Cross dispatching" where an officer is dispatched out of district to a call will also increase response time. Low priority calls that are received during roll call/shift change negate an immediate response from patrol officers thus increasing response times.

As a matter of practice, we like to keep our average response time for all calls occurring inside the City under ten (10) minutes. As previously stated, there are certain incidents where that becomes impossible. However, our goal is realistic and as demonstrated by the April through June 2009 report was met. In an effort to assist the reader in reviewing the Workload Analysis Report the following is a list of some relevant interpretations for review.

### District 1 Totals

# WORKLOAD ANALYSIS REPORT

## January - June 2009

The January through June 2009 Workload Analysis reflects a total of 11,430 calls for service. This figure does not include traffic stops, foot patrols or courtesy cards initiated by officers or activity occurring in District 0 (calls outside city limits/mutual aid). The average response time for calls was five (5) minutes from the time the call was received by our communications technician until the first responding officer arrived on the scene. The average time to reach a disposition and clear the call was twenty-three (23) minutes.

The Workload Analysis also allows us to track activity levels by hour by day. We analyze this data to determine our staffing levels for patrol shifts. By reviewing our Workload Analysis Graph on the following page, you can see that our busiest hour of activity was between 9AM and 10AM. One thousand twenty-eight (1,028) calls for service were received during this time frame. The next busiest hour was between 10AM and 11AM when 833 calls for service were received. The ability to obtain this type of data is critical to effectively staff our patrol shifts.

While reviewing this report it is important to note that various factors can influence average response times. "Stacking" of calls where lower priority calls are held so that calls of a more urgent nature can be dispatched and responded to commonly occur. "Cross dispatching" where an officer is dispatched out of district to a call will also increase response time. Low priority calls that are received during roll call/shift change negate an immediate response from patrol officers thus increasing response times.

As a matter of practice, we like to keep our average response time for all calls occurring inside the City under ten (10) minutes. As previously stated, there are certain incidents where that becomes impossible. However, our goal is realistic and as demonstrated by the January through June 2009 report, was met. The following is a break down of calls for service by district with the overall total calls, average response time and average time to resolve the call:

### District 1 Totals

1,960 Calls for Service  
 5 minute average response time  
 23 minute average time to resolve call

### District 4 Totals

2,692 Calls for Service  
 5 minute average response time  
 26 minute average time to resolve call

### District 2 Totals

2,056 Calls for Service  
 5 minute average response time  
 27 minute average time to resolve call

### District 5 Totals

2,038 Calls for Service  
 5 minute average response time  
 24 minute average time to resolve call

### District 3 Totals

2,684 Calls for Service  
 6 minute average response time

### Total Calls for Service
